

Wet Scrub Resistance Test

Erichsen Scrub Resistance Tester
applying abrasive forces with a nylon
brush or pads onto the tile surface

Scrub Resistance of Stoprain coatings against various cleaning systems

Test Conditions

Scrub test with continuous feed of a cleaning solution on the tile while scrubbing the tile with a nylon brush and standardized force, after 500, 1000, 2000 and 5000 cycles the scrub test was stopped and the contact angle was measured using the dynamic method
